

RFID systems

Part No:MPFM-RFID-systems

The RFID system is for integration partners, industry partners and technology partners to

develop complete RFID solutions to critical business problems. RFID systems can be active or passive and have a variety of ranges and tag features.

With innovative use of RFID and other types of RF, we create new opportunities with direct impact on the bottom line.

We integrate the RFID technology and Bluetooth for logistic and manufacturing applications. This means that transponders are placed in transported goods or products in progress and information can be sent to a network via Bluetooth enabled readers.

The RFID system comprises of our RF products combined with products and technologies from our technology partners and our system design and consulting services.

Applications

- Tracking of food products
- Manufacturing control
- Tracking of Fast Moving Consumer Goods (FMCG)
- Tracking and authentication of documents and media
- Tracking of in-shop, in-compound or in-park customer/visitor movement and purchase patterns
- Mass transit
- Tracking of animals
- Access control
