

EX Ethernet Chip Evaluation Kit

Part No:MPGC-SoC-EX Ethernet Chip

DESCRIPTION:

The DSTni EX Ethernet Chip Evaluation kit allows for easy evaluation and programming of the DSTni EX Ethernet Chip. Includes board, Evaluation copy of Paradigm C/Tools (2 weeks), schematics, DSTni Real-time OS and TCP/IP stack binary and example code, royalty FREE.

KIT CONTENTS:

- One DSTni EX Evaluation board with 2 serial ports and 10/100M Ethernet port
- Serial cable for debugging and loading software
- Ethernet cable to connect to the PC/network
- 12VDC power supply
- CD with DSTni OS software and complete documentation
- Trial version of Paradigm C/Tools (14 days timeout)

The difference between the Evaluation Kit and Development Kits is the Development Kits have the full development board and an option for the JTAG ICE emulator. The Paradigm software is a full version with the Development kits.

SOFTWARE:

Paradigm C++ Evaluation Included (2 weeks). All other software and hardware is fully useable, only the Paradigm software must be upgraded to the full version. Includes royalty FREE DSTni OS, TCP/IP, Web Server binary software. Everything you need to write an Ethernet program, download it, debug it, and execute it.
